

What if the answers *REALLY WERE* right at your fingertips?

EUREKA!

Get results NOW with Chemistry, Biology, Disease and Pathway Searching Tools from **GeneGo**

With **GeneGo's** easy-to-use knowledge mining you can quickly find high quality, relevant answers from our **manually curated databases**. Type in a gene, protein, compound, drug, biologic, or disease and Eureka! You will find correlated pathways and enrichments for tox, biomarkers, signaling and metabolic processes that are built by experts and unique to GeneGo. Detailed gene/protein and compound/drug pages include synonyms, SNP's, complexes, GO localization, molecular function, abundance, species and relation. Explore related categories such as ADMETox and physical properties for compounds, biological activity, drug-drug interactions, and drug status. You can even order compounds from Sigma directly!

Refine your search with the ability to ask more directed questions, such as "In which pathways or tumorigenic process(es) is c-met implicated?" or "Which inhibitors have anti-angiogenic activity?" or "Find compounds that inhibit COX-2 but not COX-1 with activity less than 1 μ M" or "Find all compounds that inhibit enzymes involved in inflammation".

You can even start your search with a chemical structure!
