

Compare your compounds to your competitors...

Your competitors do!

MetaDrug™

Compound Based Pathway Analysis

GeneGo's innovative platform combines chemistry and biology, offering a unique advantage in drug development

MetaDrug™ lets you predict human metabolism, toxicity, and mode of action of compounds from basic structural and experimental data and integrates that information with pathway analysis tools to investigate pharmacological efficacy, toxicity endpoints, drug-drug interactions and off target effects. Researchers can compare their lead compounds with competitors in order to elucidate mechanistic differences and similarities across class. Used as a standalone application or in conjunction with MetaCore™, MetaDrug's manually-curated database of genes, proteins, compounds and interactions is the largest and most comprehensive in the industry. MetaDrug's easy-to-use interface is backed up by free monthly on-line training.
