

Drug Repositioning?

We can help.

MetaDrug™

systems pharmacology for drug discovery

GeneGo's unique systems pharmacology tools take the chance out of drug discovery. MetaDrug™ is an integrated data mining platform that gives you the tools you need to fully investigate drugs and their targets. Link proteins to diseases and understand their involvement in pathological processes. Query chemical structures for pharmacological, ADME and toxicological properties. Perform functional analysis of disease and drug-response gene expression, metabolomic, proteomic, siRNA, SNP, and other types of high-content experimental data. Use MetaDrug to understand on and off-target effects of your compounds as well as your competitors', predict adverse effects and identify alternative indications. MetaDrug™ is easy to use and includes free on-line training to get you in the game fast.
